Câu 1:

```
class Nguoi {
  private String ho,
  private String ten;
  private String ngaySinh;
    public void nhap () {
      Scanner sc = new Scanner (system. in );
      system.out.print ("Nhap ho: ");
      ho = sc. nextLine ();
      system. out. print ("Nhap ngay sinh: ");
      ngaySinh = sc. nextLine ();
  }
    public void xuat () {
      system. out. println (ho + " " + ten + " - " +
ngaySinh) ;
```

Câu 2:

```
  class SinhVien extends Nguoi {
    private String maSV ;
    private double dumTB ;
    public void nhap () {
      super. nhap () ;
      Scanner sc = new Scanner (System. in );
      System. Out. print ("Nhap ma SV: ");
      dumTB = sc. nextDouble () ;
  }
    public void xuat () {
      super .xuat () ;
      system. out. println ("MaSV: " + maSV + " -
DiemTB: " + dumTB) ;
```
